

NSW Renewable Energy Zone geographical areas

(Established by the NSW Government)

The NSW Government has identified five Renewable Energy Zones across the state.

The Zones will combine renewable energy generation such as wind and solar, storage such as pumped hydro energy storage, and high-voltage poles and wires to deliver energy to the homes, businesses and industries that need it.

The Renewable Energy Zones will deliver multiple benefits to NSW, including more reliable energy from significant amounts of new energy supply; energy bill savings from reduced wholesale electricity costs; emissions reduction from a cleaner energy sector; and community partnership.
